

Super high precision metal tubes and pipes from **Japan**

Point 1

Irregular Tubes

We provide all specifications of tubes. We deal with every need of clients ranging from deformed pipes including single, square and elliptical items to high accuracy/high surface profile requirements.

Point 2

Various Materials

We provide all types of metal pipes. We process copper, brass, stainless, and even hard-to-cut materials, such as Titanium (alloy) and CCM, into pipes.

Point 3

Small Lot Production

We provide any products with minimum lot of one unit when needed by clients. We deal with requirements for trial production/development, and provide anytime any volume not only for regular items but for special order items.

KAKOH Co., Ltd.
